

Bob Varsch.

Memo from
J. LIEBERBERG

APR 17 1982

Thank you for your note.

Replica plating was a lot of fun both to think about and to see it work.

Even more may I say was the 1956 follow-on enclosed. It was one of those ideas that couldn't fail; yet was simply worth the demonstration. The exptl. procedure is even simpler (dilutions + selection).

Want to try it on your students?

Yours,
John.

P > S

P.S. This even has some technological use now - e.g. in enriching for interferon, etc. - producing clones after shotgun gene splicing.
